Welcome to the VanDusen Garden 39th Annual Plant Sale

Celebrating Canada's 150th Birthday

Our 2017 Plant Sale Catalogue will help you explore the thousands of plants available at this year's sale. Carefully assembled information on this vast array of plants will help you choose the perfect additions to your gardens, decks and patios.

This year, we are celebrating Canada's birthday! We want to encourage everyone to have their garden pop this year with Canada's red and white colours. From the beautiful white *Dicentra spectabilis* 'Alba' (white bleeding heart) to *Monarda didyma* (scarlet flowered bee balm) there is something here for every patriotic gardener.

Many thanks to over 400 hardworking volunteers who dedicate thousands of hours and all of their gardening wisdom to make this sale such a success.

We are proud to continue our tradition of making a substantial financial contribution to VanDusen Botanical Garden.

Let's celebrate Canada's birthday together!

The flower of the **Western flowering dogwood**, *Cornus nuttallii*, is the provincial floral emblem of British Columbia. It is the only such emblem that is the flower of a tree; the other nine provincial emblems are flowers of shrubs or perennials. Western flowering dogwood was selected as the emblem in 1959 and it is now an iconic image on many BC products. The image is composed not of flower petals but of the white, modified leaves called bracts that surround much smaller flower parts.

The Western flowering dogwood, Cornus nuttallii, grows in openings in coastal forests, normally with its crown in the sun and plentiful air flow around its branches, and its roots in moist shade. The species is susceptible in cultivation to the fungal disease, anthracnose, so is important to plant it in sites with its preferred conditions. It is the same with most native plants – they do best cultivated in sites similar to where they naturally grow. There are a few western flowering dogwood plants available for sale in the Pacific Northwest Natives section of the Plant Sale.

FUCHSIAS AND BEGONIAS

Fuchsias bloom from early summer to early autumn, come in thousands of varieties, and are excellent for baskets and planters or planting directly in the garden. Hummingbirds are attracted to nectar from the colourful flowers.

Growing requirements:

Morning sun, dappled or partial shade all day. Grow in moist soil, high in organic matter. Feed with a quick-release water-soluble fertilizer every two weeks.

Hardy fuchsias:

Fuchsia magellanica, F. magellanica 'Aurea', F. 'Riccatoni', F. 'Genii', F. 'Gracilis'

Variegated leaf varieties:

Fuchsia magellanica 'Tricolor'; F. 'Golden Marinka' (yellow leaf); F. 'Autumnell'; F. 'Island Sunset'

Semi-hardy:

Fuchsia 'Otto' - Large, exuberant double flowers with very flared red sepals and purple corollas. Attractive to bees, butterflies and humming birds

Fuchsia 'Winston Churchill' - Flowers are double, with short, reflexed, pink sepals and tube, and bluish-lavender petals

We have an excellent collection of Hardy fuchsias, with various leaf and flower colours, that can grow to 200cms (6ft) here on the lower mainland. Hardy fuchsias grow back late each spring.

Trailers and uprights can be potted into planters and baskets. Pinch back new growth tips until the end of June. This will promote new growth and more flower buds.

To make a basket we recommend using up to eight, 2 ½" plants in a twelve inch basket. Planting all of the same variety in one basket makes a much nicer show.

We have the following varieties available for 2017, plus a good selection of old and new varieties in many colours, with single and double blooms, flower style and sun tolerance.

Fuchsia (Diva Series) 'Midnight', 'Rose and Purple', 'White and Lilac'

Fuchsia 'Garden Meister' - Red tubular-shaped, honeysuckle fuchsia blossoms

Fuchsia 'Marinka' - Scarlet sepals and deep red petals, on this free flowering trailing fuchsia

Fuchsia 'Lottie Hobby' (aka 'Mini False Creek') - Bushy, upright, vigorous plant has very small serrated leaves and small, single flowers with dark pink sepals and tube, and deep pink petals

Fuchsia 'Pink Marshmallow' - Extra large double flowers, with long pale pink tube

Begonias

Fibrous begonias are annual plants. These brightly colored begonias are equally at home in full sun or shade, in containers or garden beds.

Angel Wing begonia is named for the shape of its leaves. With its attractive year round foliage, you can grow an Angel Wing begonia indoors as a houseplant, in bright, indirect light. These cane-type begonias are some of the world's best performing and easiest begonias to grow. They have interesting leaves and magnificent displays of pendant and drooping flowers.

Nonstop begonias can be planted in a flowerbed, hanging basket or patio container, in any well-drained soil.

Solenia begonias - These hiemalis-type begonias have been a popular semi-shade basket plant for years.

The new Solenia series are faster growing, mildew resistant and take full sun, and are a cross between a tuberous begonia and a wax begonia. They are 'self cleaning' and require no deadheading.

Miniature Roses

We have an abundance of miniature roses in all colours, plus some fragrant varieties. These miniature roses can be used in pots, and also do well planted in the garden.

GERANIUMS (PELARGONIUMS)

Zonal geraniums are one of the most easily recognized annuals on the market. They have several distinctive features including almost kidney-shaped leaves that may or may not have darker circular marks on them. Flowers resemble spheres that stand atop sturdy stems. Colours available will be white, pink, salmon, and classic red.

Ivy geraniums, also known as trailing geraniums, are perfect for window boxes and planters. Ivy geraniums bloom continuously all season long with semi-double flowers in colours from white to red to different pastel shades. Flowers are “self-cleaning” so deadheading is not needed.

Geraniums are versatile in the garden, gracing pots or planting beds with low maintenance beauty. On the whole geraniums prefer full sun but will tolerate part shade. Do not overwater. They will bloom all summer right up to the first frost.

We have more varieties of scented geraniums this year including: peppermint-scented geraniums – an all time favourite; lemon-scented geraniums – always popular; pink-champagne geraniums – citrusy scent; and “Prince George” orange-scented geraniums. Scented geraniums are grown for their leaf fragrance rather than their flowers.

ORCHIDS AND EXOTICS

The orchids available at the sale are outstanding indoor plants, with attractive blooms. Some types last for several months at a time. Orchids are far tougher and hardier than most people think, and are mostly extremely adaptable. All orchid plants at the sale come with detailed culture sheets, to provide information on how to nurture them. Here are some examples of the types of orchids that we expect to be available at the sale:

- Phalaenopsis (moth orchid) - this is the most popular type of orchid because the blooms are so long-lasting. There will be a big selection, perfect gifts for birthdays, Mother’s Day or any special occasion. They feature flat, glossy, spreading leaves supporting arching spikes of white, pink, purple, yellow, or spotted/striped blooms.
- Oncidium, a variety of intergenerics - blooms with spikes of fancifully patterned flowers in shades of white, yellow, red and brown.
- Cattleya – several types of plants could be available, depending on what is ‘in spike’ at the time of the sale; large, showy flowers with a variety of colours.
- Dendrobium – a variety of plants could be available, depending on what is ‘in spike’ at the time of the sale; bloom in sprays with delicate florets that are 1 inch to 2 inches across, in an array of colors including purple, pink, fuchsia, white, yellow, green and bicolours.

There will be a large selection of fascinating carnivorous plants, some being hardy outdoor types. Here are some available varieties:

- Sarracenia – this is a large and varied family of North American Pitcher Plants. These incredible plants display a multitude of foliage colours and are winter hardy in the Pacific Northwest. They also eat bugs.
- Dionaea – Venus Fly Traps are the only ‘active’ carnivorous plants.
- Drosera – Sundews are sticky plants, great for trapping fruit flies and fungus gnats in your house or greenhouse.
- Pinguicula – attractive plants with colourful, violet-like flowers.

POT LUCK

Pot Luck has an interesting selection of perennials, trees and shrubs. We have plants for all seasons – astilbes, geraniums, hostas, irises, grasses, ferns, hellebores, hemerocallis, rogersia, peonies, primulas and sedums, to name a few. We have baskets of perennials selected for specific areas (shade or sun), and many pots of succulents for that sunny spot.

Plants have been collected from gardens of members and friends of VanDusen Botanical Garden, some from VanDusen Garden, while other plants are donated by local nurseries. There are many old favourites, and some more unusual offerings. We are not always able to be sure of the colour or exact botanical identity – hence the name Pot Luck.

The Pot Luck group relies on plant donations throughout the year. If you would like to donate plants for next year’s sale, please call Jean McComb at 604.261.4556, or Margie Knox at 604.261.1868.

SEEDS

Plant Name	Description
Red & White	In honour of Canada's 150th birthday, we are featuring seeds of plants with colours of red or white in either their flowers, fruit or leaves.
Trees and Shrubs:	
<i>Calycanthus occidentalis</i>	California Allspice is a large shrub with aromatic dark green leaves and red flowers that look like tiny water lilies.
<i>Cornus nuttallii</i>	The Pacific dogwood bears white flowers (bracts) in spring, orange-red fruit in fall with beautiful, fall foliage colour
<i>Euonymus alatus</i>	The leaves of the burning bush turn bright scarlet in autumn.
<i>Meliosma pinnata</i> var. <i>oldhamii</i>	This small tree has feathery foliage and bears panicles of white flowers in early summer.
<i>Ribes sanguineum</i>	The flowering currant is a Western North American native that was a favourite in Victorian temperate gardens and is slowly being rediscovered for its simple elegance
<i>Rosa highdownensis</i>	This species rose bears single red flowers, followed by large, flask-shaped red hips.
Perennials:	
<i>Aquilegia formosa</i>	This columbine has deeply divided leaflets and bears pendent flowers with orange sepals, yellow petals with red lobes and reddish-orange spurs. A western North America native plant
<i>Asclepias incarnata</i>	This milkweed loves wet soil and bears clusters of rose-red flowers attractive to bees and butterflies.
<i>Cornus canadensis</i>	Bunchberry is a lovely woodland groundcover that bears white dogwood-like flowers (actually bracts) that are followed by bright red, spherical fruits
<i>Crocsmia</i> 'Lucifer'	This montbretia bears bright red flowers in arching spikes on wiry stems in midsummer
<i>Epilobium canum</i>	In summer, California Fuchsia produces tubular scarlet flowers that attract hummingbirds.

The Seed Collectors offer many more seeds of trees, shrubs, annuals, perennials at the plant sale and online at www.vandusen.org - click on Seed Sales.

The flower of the western trillium, Trillium ovatum, is like three flowers in one: it opens pure white, then fades to pink and finally turns dark purple before going to seed. The seeds are spread by ants that feed on a fleshy part of the seed structure. Trilliums naturally go dormant and die to the ground during our dry summers, like so many early spring-flowering native species. They do come up the following year, sometimes in new, unexpected places thanks to the ants.

PACIFIC NORTHWEST NATIVE PLANTS

Gardening with PNW Native Plants

- Plan according to the habitat conditions in which the plants naturally grow: sun exposure, slope (shedding or receiving water), soil moisture, soil nitrogen and soil texture - organic (add compost) to mineral (add sand and gravel)
- Plan for the mature size of the plant. Native plants are best when they can grow to a natural height and width without excessive pruning.
- Plant in descending layers. Many of our native plants are from forest habitats with multiple layers of trees that shade shrubs, perennials and ferns.
- Place plants together from the same habitats. They have evolved forms, leaf shapes and specific relationships to grow together successfully.
- Many perennials are spring-flowering when there is natural soil moisture available, and some go dormant in the summer.
- Plants in dry habitats usually prefer well-drained, low nitrogen soil; plants in very moist habitats usually prefer high nitrogen soil.
- Climate and habitats are changing; where possible use plants that prefer drier soils and that can survive dry summer conditions with watering restrictions.

The Government of British Columbia enacted a law in 1996 to protect three iconic coastal rainforest plants - a tree, a shrub and a perennial: the **Western flowering dogwood**, *Cornus nuttallii*, **Pacific rhododendron**, *Rhododendron macrophyllum*, and **western trillium**, *Trillium ovatum*. The law prohibited actions that would reduce their populations such as removing the plants or picking their flowers, which prevents them from producing seed. The law was rescinded in 2002 however the plants and their habitats are still vulnerable to disturbance.

The following symbols are used: Sun=☼ Part shade=☼○ Shade=● * Denotes that tree or shrub is suitable for small gardens or for planting in pots.

Henry Eddie, a renowned BC horticulturist, developed '**Eddie's White Wonder**', a hybrid dogwood tree in the 1930s and 1940s. It is a cross between the western flowering dogwood, *Cornus nuttallii*, which has a white to pinkish bracts (not petals) and the eastern dogwood, *Cornus florida*, which can have deeper pink bracts. '**Eddie's White Wonder**' is of narrow form with layered branches typical of tree dogwoods and white flowers (bracts). It was bred to be more resistant to the fungal disease, anthracnose, than the native dogwood.

The maple tree was officially recognized as Canada's official tree emblem in 1996 but its leaf has been an emblem in Ontario and Quebec since 1868. There are ten species of maple tree native to Canada and at least one species is native in every province. The maple leaf on Canada's flag is stylized from these many species. In British Columbia, there are three native maples: vine maple, *Acer circinatum*; Douglas maple, *Acer glabrum*; and big-leaf maple, *Acer macrophyllum*. There are maples for sale in the Trees and Shrubs Section and the Pacific Northwest Native Plant Section of the Plant Sale.
